

Lithionics Battery Installation Requirements & Warranty Registration

SECTION I: INSTALLATION & MAINTENANCE GUIDELINES

By proceeding with the purchase of our lithium battery system products, you have come to an understanding of the product specifications, operating limits, storage, maintenance, and installation requirements outlined by the manufacturer. To register your battery system for warranty coverage, system components must be operated within the published specifications, and used in combination with approved charging equipment and installation diagrams. **This must be documented by submitting a completed RSI (Request for System Integration) document and wiring diagram.**

Installation must follow the wiring diagrams found in our installation guides published on our website: <https://lithionicsbattery.com/support/>. Any deviation from our wiring diagrams must be documented and submitted for approval from our engineering department. You may also provide your own electrical wiring diagram for approval.

If you have any questions regarding the product specifications, operating limits, maintenance, or installation requirements, please consult the user guides and diagrams before proceeding.

SECTION II: INSTALLATION ACKNOWLEDGEMENT

By signing and returning this document to your Lithionics Battery Product Manager you agree to follow the instructions in section I of this document and you agree to follow the RSI and the wiring diagram that you provided. (Please note: Any future deviation from the equipment listed in the submitted original RSI requires you to submit a revised RSI that lists all the changes to the original and must be approval by our engineering department.)

Name: _____

Company: _____

Signature: _____ Date: _____

Please attach a copy of the RSI document and wiring diagram that will be followed for installation along with photos of the completed installation.

(By signing this form and providing the requested documentation, your battery will be registered for warranty)
